

## LIPSKERTEXT – Project Summary

### 1. What is Lipskertext?

Lipskertext is an experimental literary tokenization project. A complete body of literary work by Dmitry Lipskerov has been divided into unique text fragments. Each fragment is issued as a non- fungible token (NFT) on the Base blockchain, forming the digital body of the original work.

### 2. Licensing Model

This project is governed by a public license offer under English law. By acquiring and demonstrating control over all tokens comprising a given work, a buyer (the “Licensee”) is automatically granted a worldwide exclusive license to the full work, including rights to:

- Reproduce (print, digital, audio)
- Distribute commercially or non-commercially
- Translate and adapt
- Perform publicly
- Create derivative works
- Sublicense to others

### 3. How Does Licensing Work?

To accept the license and activate rights:

- Acquire 100% of the issued tokens for a given work in a single wallet.
- Request a control token from the author.
- Return the control token within 3 hours to verify wallet ownership. This validation triggers the exclusive license, recorded on-chain if desired.

### 4. Optional Full Rights Transfer

The Licensee may choose to:

- Retain the tokens and hold the license indefinitely; or
- Burn all tokens, upon which the author will sign a Deed of Assignment, transferring all intellectual property rights permanently to the Licensee.

### 5. Legal Basis

Jurisdiction: England and Wales

Legal framework: Public offer, digital contracting principles

SHA-256 hashes and IPFS references ensure document integrity

No other licenses to the work will be issued by the author

#### 6. List of Tokenized Works

- |         |   |
|---------|---|
| (0001). | Title of work: Туристический сбор в рай<br>Total number of fragments: 701<br>Length per fragment (characters): 450 or less              |
| (0002). | Title of work: О нем и о бабочках<br>Total number of fragments: 211<br>Length per fragment (characters): 450 or less                    |
